

Helping children learn by having fun

The human brain uses the body to recognize the world around us. Using our bodies helps us to understand the laws of nature. So, when children play and have fun, it's serious business; they are actually hard at work, learning.

Fortunately, children love to play and use their bodies naturally. It almost makes you wonder how wise we adults are, when we are always asking kids to settle down, and whether they 'have to run around like that'. Well, in fact, they do.

Our wheeled toys help children to make better use of their bodies, to move and to play. This does more than increase their physical skills. It also improves their mental capacity.

THE NEED FOR CREATIVITY

We have never had a better reason to take play seriously than we do today. Imagination and creativity are in ever-increasing demand in modern society; the world needs people who can draw new meaning from items already in existence. These are the exact skills that play helps to nurture and develop.

Learning by Moving®

Play goes right to the brain. All the available research indicates that there are clear links between the ability to play, to move and to learn. So playing and moving improve understanding of language and mathematics, concrete and abstract thinking, and rational and social intelligence.

Children develop their knowledge and skills by stimulating the brain. Their physical activity creates stronger links between the right and left sides of the brain, which is why it is important that they crawl, walk, cycle and generally move around. Playing allows them to experience the world with their own bodies, trying out the laws of nature that they can't understand without scraping their knees.

Playing to learn social skills

Around the world, many children play at computer screens. This may train them to think and act in symbolic universes, but it is not where children get involved with their environment. Nor is it a place where they can develop social skills such as friendship, teamwork, conflict management, or just simply being together.

Play is where children acquire their earliest experiences of social space and skills, where they learn that there are rules for how to behave with others. They discover that they can't always have their own way, that they can give as good as they get, and that they can achieve more by working together.

How our trikes and bikes stimulate play and move children

Children learn by moving. To support and encourage children in their play activities, it is important that we give them access to a wide range of toys that inspire many different types of play.

Everything we build is designed to make children want to play. Our products invite activity. They create that magical space where youngsters lose themselves in play; involved, happy, and active. In this environment, children form healthy habits that will last a lifetime.

New playmates - with and without wheels

A trike can be a fire engine. With a trailer, it may be an ambulance. Or a trike can be a horse in the Indians' battle against the cowboys. In this way, physical activity is linked to children's creative imaginations. Bikes and trikes do not determine what children play, but rather support them in their play activities.

MOTOR SKILLS

Motor skills define the ability to move and to use the body, legs and hands productively in coordination with the senses. Good motor skills involve five different elements; strength, balance, coordination, a sense of three-dimensional space, and the ability to sense the world around us, which are used to direct how the body moves.

There is only one way to improve motor skills; practice, practice and more practice.

It starts with a trike.

It ends up as social intelligence

When children play with their trikes or other wheeled toys, this play is their world. The trikes can play any part the children like, from the youngest child's observation games to the complicated role-playing of older children. Under the right conditions, children can rapidly turn their experiences into general understanding and awareness at a speed, and with a clear perception, that researchers find difficult to explain. All it takes is for children to be allowed to play freely.

Learning to know what is important

The ability to tell the difference between what is important and what is not is vital to human beings, especially in an age when all our information comes from television, computers and mobile telephones. Children learn what is important as a reflex when cycling. When they are on a bike, they simply cannot look at everything. They have to stay focused.

HELPING CHILDREN WITH DISADVANTAGES

Some children are born with a sense of balance that is not well developed. Other children simply don't move enough. The good news is that it doesn't usually take too much to improve motor skills. Daily play involving body movement, over a period of a few months, may help these children catch up with their age group. Our products can even help children with disabilities. Several Winther products feature three or four wheels, allowing these children to be encouraged to join in play activities.

CAREFULLY CREATED IDEAS AND STRICT ATTENTION TO DETAIL

To achieve great design, original ideas must be thoroughly evaluated and used in the right way. This requires insight and knowledge.

Leading the way when we design

Winther products are a Danish design for children all over the world. This has made us a global leader in the production of trikes and bikes, with a responsibility to lead the way in designing wheeled toys that make children move and learn.

We define the product before we design it

Designing a Winther product is about much more than just making it look good. It's about creating a bike or trike that will provide children with new ways of moving and learning. We begin by defining functions and benefits that will give children new and fresh options for play. And then we use our design logic to make these functions come to life.

We want to give children Learning by Moving and, to do this, we collaborate with teachers, childcare facilities, physiotherapists and researchers. We add the world famous Danish design competency, focusing on simplicity, functionality and a proud Danish tradition of playing and learning.

We seek inspiration at important trade fairs, but are even more inspired by the innovative minds of children playing. When designing wheeled toys to open new worlds for children, our focus is always on play. This is what makes a Winther product much more than just another bike or trike.

Wheeled toys with play value

To be a proper Winther product, each new design must fulfil certain criteria. The toy must offer multiple ways of playing, providing great play value, and allow children to play together, thus developing their social skills.

At the same time, the product must be durable. The simpler the better, as a toy that is too complex is more likely to be breakable. And of course, each product must be safe and ergonomically correct, so that children play and develop in a healthy way.

How we develop and test

When we develop and test a new product, we take great care at each step, only finishing once every detail has been worked out. We are not satisfied until we see happy children playing with the vehicle.

First of all, sketches of the idea are discussed and refined, and then developed into the computer-designed blueprints that we use to build the first prototype. 3D printing can be used to make the plastic parts of the prototype.

Then we involve children from the intended age group to test the prototype, observing them as they play with it. Are the size and proportions right? Do the functionalities meet our demands? Does the product trigger the imagination of the children in the right way?

Based on these findings, we adjust the product, building and testing a new prototype if necessary. When we are satisfied with the design, we test its strength and durability. Only once all these steps have been taken will we start production of the newly created Winther product.

MEETING ENVIRONMENTAL REGULATIONS TO PRODUCE SAFE TOYS

Our manufacturing facilities are fully compliant with Denmark's stringent environmental regulations, and our products fulfil all current international safety standards.

To ensure the safety and health of children, all our products are free from phthalates, lead and chromium-6.

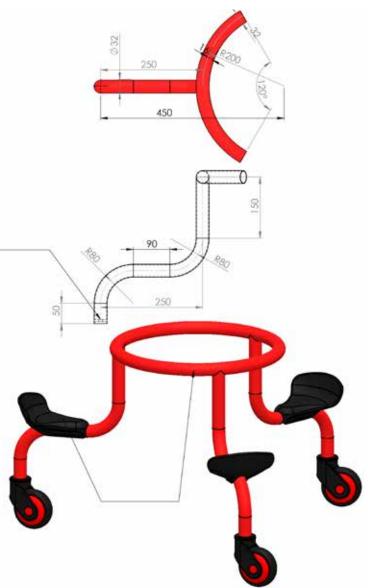

HIGH STANDARDS OF SAFETY AND QUALITY

Play is important, but high standards for safety and quality cannot be compromised. We think of even the smallest detail in every product, ensuring they are ergonomically correct, with no sharp edges. In our opinion, the joy of children's play should not be spoilt by mistakes in design or production.

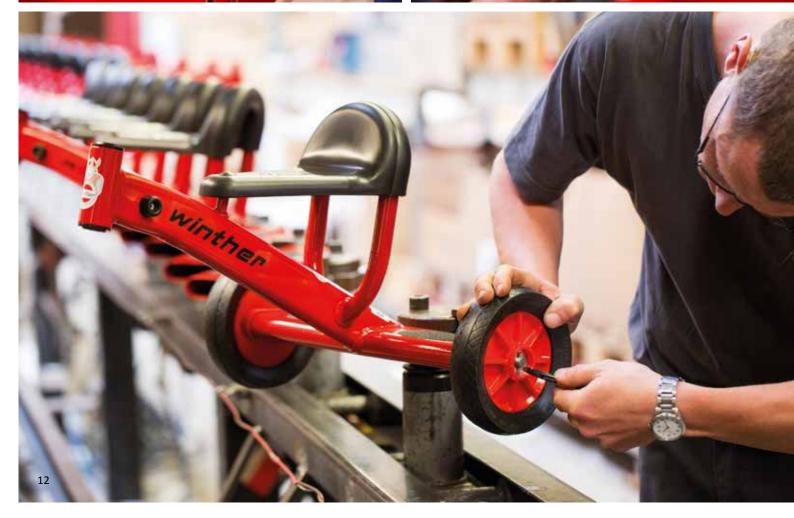

SOLID QUALITY MEANS SENSIBLE ECONOMY

We use first-class components and proper craftsmanship in every joint to ensure that the trikes and bikes run smoothly. With one of the strongest coatings in the world, our products are capable of resisting the toughest challenge; children playing every day. Because of this, a Winther product is a solid long-term investment, making economic sense in the long run.

Proper craftmanship and solid quality

Winther is Danish design built with care; we care about what we do. We care for our products, we care for our customers but, most of all, we care for all the children around the world who play and grow up riding our bikes.

A Winther product is true Danish quality, involving both new technology and old-fashioned craftsmanship.

Modern production technology not only makes our wheeled toys affordable, it ensures that they are robust. Welding robots ensure our wheeled toys benefit from consistent weld quality and durable frames, and our powder coating is extremely strong and rust resistant.

Experience and skill

Our very experienced, highly skilled craftsmen perfectly complement the modern technology, providing the attention to detail necessary to maintain production quality. This makes sure that our wheeled toys can withstand hard knocks in the playground.

In short: Choose Winther because it is a fun vehicle. Choose Winther because it supports children's growth. Or choose it because of both. No matter what, Winther is a solid investment through and through.

SERVICE FOR SATISFIED USERS

At Winther, we take pride in delivering products that fulfil the needs of those who buy them and use them. Service and cooperation are essential to us, and we are easy to reach with any feedback. If any issues arise, we will do our best to resolve them quickly.

FOR KINDERGARTENS, SCHOOLS, AFTER-SCHOOL CLUBS AND PLAYGROUNDS. SUITABLE FOR AGES 2-12

Winther

Easy to assemble! Please take a look!

Viking is probably the world's best range of wheeled toys for educational use. The range covers a wide variety and covers many possibilities, and the Viking quality is second to none. Viking durability can't be beaten and these products give children countless play opportunities. You will see our products all over the world, almost always in the company of children absorbed in investigating themselves and their surroundings.

Viking products are toys with great play and activity value. Each of the many different products is designed for children with different levels of motor skills and aimed at helping them in their play and development. The Viking range gives children the best access to play activities on a scale that suits their different builds.

Tricycle, small | Model 450.00

To an adult, it looks very simple. To a child, it is a machine from a different world and love at first sight. The tricycle helps develop children's motor skills. The tricycle seduces children of all ages and, in the process, trains their muscles and develops their sense of coordination and space faster than you can say "try it".

Tricycle, large | Model 452.00

This tricycle is equipped with a large front wheel, which allows slightly older children to really use their strength. With a trailer attached, the tricycle immediately becomes a truck in a gravel pit, Cinderella's pumpkin carriage or an enormous farm tractor with trailer.

Tricycle, medium | Model 451.00

This tricycle is a Winther classic. Millions of children have proved its worth. They love it. They cannot wait to get started once they see it. All tricycles can be used with a trailer, which makes them even more fun to play with.

Patent no. ZL201130425225.9

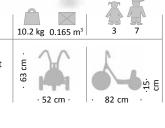

Easy Rider | Model 479.00

It's red and it's very cool. It has a low seat and a Harley-type handlebar. The large front wheel lets children work up a good speed and maintain momentum. We have even seen "big boys" cry when it was time for lunch and they had to stop playing with it.

Patent no. ZL201130425256.4

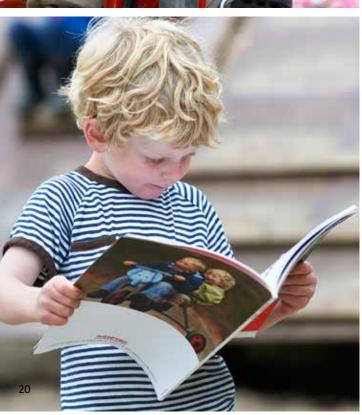

58 cm

98 cm

Ben Hur tricycle | Model 465.00

This tricycle makes it easy for more children to play together at once. Roman soldiers fighting a mighty battle with the emperor's soldiers is only one of virtually countless possibilities, stimulating their imaginations without compromising safety. Passengers standing up can hold on to the safety bar. As always, attaching a trailer can make it even more fun to play with.

Patent no. ZL201130404545.6

62 cm

58 cm

Ben Hur trailer | Model 466.00

Versatile trailer for all Viking tricycles and taxis. Equipped with safety bar and slip-proof foot plate. Ideal for children's games that take place in the past, the present and the future. Has Ben Hur been to Mars? No doubt – in a play universe near you.

E 58 · 58 cm ·

Truck | Model 493.00

It's time to get down to work. Sand and playground equipment is moved around effort-lessly on this sturdy and well-designed bike. It provides children with ample opportunity for social role-play, and stimulates imagination, motor abilities, and reflexes.

Patent no. ZL201130424897.8

· 52 cm · 103 cm

Taxi | Model 462.00

Extremely popular, strong taxi that is ideal for use in all kinds of role-playing games. A safety bar is good for children to hold on to, and makes children feel secure. Attaching a trailer provides even more possibilities for playing advanced games.

Patent no. ZL201130401686.2

Twin Taxi | Model 468.00

Children often use play to imitate adults or situations they have experienced in their day-to-day lives. This kind of play activity is often called role-playing. The Twin Taxi stimulates the imagination – the possibilities are endless. Has room for three children.

Patent no. ZL201130425575.1

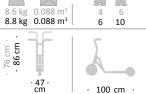

Scooter, small | Model 460.00 Scooter, large | Model 467.00

Mastering a scooter gives children a tremendous sense of achievement. First it was the tricycle. That was fun. But a long time ago (last week). "Now I have grown up." "I can balance." It gives heaps of confidence. It is no wonder the wheels of the scooter never stop turning as long as there are children on the playground.

Scooter, maxi | Model 495.00

A challenging and fun scooter, which is similar to model 460.00 and 467.00 but, aimed at slightly bigger children. Rest assure the wheels of this scooter will never stop turning as long as there are children on the playground.

10.6 kg 0.128 m ³	8 12
. 93 cm .	1
· 47 · cm	· 123 cm ·

Safety Roller™ | Model 475.00

Well-suited for children, who need to strengthen their balance and motor skills as well as for children with reduced capabilities. The Safety Roller provides maximum stability. Patent no. ZL201130401703.2

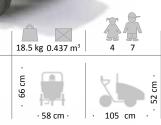

Viking Kangaroo | Model 496.00

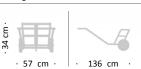

With this fun trike the child can bring out deliveries in the form of sand, toys, – anything really – to friends all over the playground. The trike has a striking resemblance with a cargo bike and unlike the traditional delivery bike it has a real box in front – and not just a step plate. Load capacity 50 kg in the carrier box and 50 kg on the seat.

Rickshaw | Model 463.00

Lots of fun for two - with one child as passenger, the other pulling. Seat with back support and safety bar, slip-proof aluminium foot plate and a small wheel that ensures that the rickshaw does not tip up.

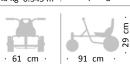

Comes fully assembled upon delivery

RowKart™ | Model 497.00

This fun inspection trolley will be the star of the playground. To really get things going, children need a good sense of rhythm as they pull and push the handles for forward motion and steer with their feet. It is excellent fun and excellent for strengthening motor and coordination skills.

Patent no. ZL201130401687.7

FunCart™ | Model 498.00

Cool driving characteristics making it exciting to ride. Gives lots of fun with thrills and stimulation. Steering of the FunCart goes very smooth by using the two handle pins making the rear wheels move. Improves children's coordination skills as the child uses the entire body when driving.

Patent no. ZL201130425591.4

BikeRunner™ | Model 490.00 BikeRunner™ large | Model 474.10

The ideal play vehicle for children not yet ready for a scooter or bicycle. Provides a fun way of developing a good sense of balance.

Bicycle | Model 474.00

Once children have mastered the twowheeler, they have reached another milestone in the development of their motor skills. Their legs, arms, eyes and brain have to work together to keep their balance. This may sound difficult, but it's actually child's play. As long as they have the right things to play with.

Patent no. ZL201130425593.3

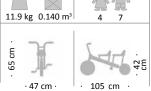

· 45 cm ·

Tandem BikeRunner™ | Model 473.10

Now children's games become even more exciting and fun. In addition to coordinating their own movements, children also have to work to coordinate these with those of their passenger. It's lots of fun and gives them plenty of opportunity to practise their balance and coordination.

Bicycle, large | Model 491.00

This speedy two-wheeler is similar to model 474.00. It is just as fun, just as stimulating only slightly bigger.

· 45 cm ·

Swingcart™ small | Model 464.00

An unconventional way to develop children's coordination skills. Children can turn the pedals using their arms, which makes this Swingcart ideal for those unable to turn the pedals on a conventional bicycle or tricycle. Strengthens arms and chest.

KE**42**

. 94 cm ·

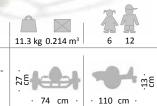

Swingcart™ large | Model 470.00

All children need challenges to help develop their motor skills. Children with different motor skills problems require special attention. The Swingcart is fun for everyone. Children turn the pedals using their arms, which makes the Swingcart ideal for children with reduced capabilities in their legs.

Patent no. ZL201130424984.3

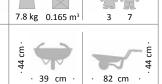

Wheelbarrow | Model 477.00

Sturdy frame standing in its own base. The body is reinforced and protected by the frame to withstand rough treatment. Even the legs are reinforced to avoid wear. Solid wheel with industrial ball bearing. The adult way of handling the wheelbarrow trains children's sense of equilibrium.

Patent no. ZL201130404519.3

VIKING CHALLENGE

FOR KINDERGARTENS, SCHOOLS AND PLAYGROUNDS SUITABLE FOR AGES 2 AND UP

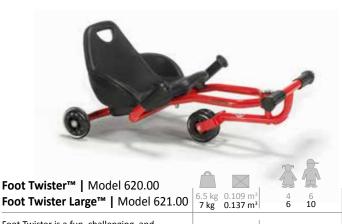

Viking Challenge is Winther's new range of special toys for kindergartens, schools and playgrounds. These toys combine second to none safety and

durability with great play value. To avoid long queues of excited children waiting their turn, we recommend that you buy more than one.

Comes fully assembled

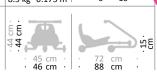

Foot Twister is a fun, challenging, and innovative vehicle that is propelled forward by the zigzag motion of eager children's feet. To get a smooth ride it takes equal amounts of rhythm, technique and upper-body coordination. It is a challenge but most of all it is great fun.

Patent no. ZL201130401702.8

Hand Twister is much like the Foot Twister. The only difference being that children use their hands not their legs for forward motion. Equal amounts of rhythm, technique and upper-body coordination are required for a smooth ride, and it is still heaps of fun.

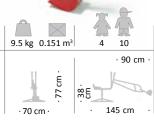

Patent no. ZL201130404561.5

100 cm

This fun digger is a true classic. It moves bucket loads of sand in no time and turns every sandbox into a construction site. At the same time it encourages role-play, stimulates the imagination, and strengthens right-left hand coordination as the movement of the shovel follows the movements of the hands just like on a real excavator. And don't worry about work place safety; the high-quality, stable construction makes the digger practically impossible to tip over.

E 6

cm cm

80

Funny carousel that challenges the children's ablility to coordinate, as the wheels can take them in any direction. The children could e.g. be set on a task by their teacher to "hit" a certain point on the ground. - Or they could simply imagine they drift off to their own favourite spot. The vehicle provides for numerous plays of social character, as the children can chat and interact in many ways, while being seated face to face. Designed by Tukan Design. Load capacity 75 kg.

Patent no. 201530038363.X

winther

VIKING EXPLORER

SPECIALIZED WHEELED TOYS FOR AFTER-SCHOOL CLUBS AND PLAYGROUND. SUITABLE FOR AGES 3-12

Lots of play value with Viking Trikes!

This range is for the older kindergarten children, as well as for schoolchildren, for playgrounds in summer amusement parks, and for hotels to offer to guest children and for use at campsites.

These products are specially developed to stimulate the motor skills and the interests of slightly older children.

Easy Rider | Model 479.74

Viking Off-Road Easy Rider with broad and rough tyres that are ideal also for uneven surfaces. This trike may have a special appeal to children who like challenges, e.g. by playing they are in a rally or a desert race.

Tricycle, Medium | Model 451.74

Cool looking Viking Off-Road Tricycle, Medium, with broad and rough tyres that are ideal for uneven surfaces. This trike have a special appeal to children who like challenges and want to set their imagination free.

13.3kg 0.163 m³

Tricycle, Large | Model 452.74

Cool looking Viking Off-Road Tricycle, Large, with broad and rough tyres that are ideal for uneven surfaces. This trike may inspire older children to play a little longer.

69 cm

BobKart | Model 488.00

Viking BobKart is a true classic on the playground. With a function like a soapbox car it invites the children to social games like a Go-Kart race. Pedals are footrest only. Both small and large kids find this trike very funny and challenging.

FunRacer™ | Model 480.50

Lots of fun for children with speed, thrills and stimulation. Also helps develop both their coordination and their ability to manoeuvre. The broad and rough tires make it easy to ride on uneven surfaces, and also absorb any shocks.

98 cm

68 cm ·

U-Rider | Model 486.00

A great item for after school facilities. Any child's dream is to drive such a cool vehicle, built in a futuristic design. Stimulates brain activity — in both the right and the left hemispheres. Steering is done by a combination of handles and body weight. Cool driving characteristics enabling the child to go both forwards and backwards.

CIRCLELINE

FOR KINDERGARTENS, NURSERIES, DAYCARE FACILITIES AND PLAYGROUNDS. SUITABLE FOR AGES 2-8

Easy to assemble! Please take a look!

Circleline is Winther's newest range of trikes, bikes and scooters for the educational market. The line is made in an attractive, modern design and strong quality complying with all current safety standards on the market. The different models provide many opportunities to stimulate motor skills, creativity and social skills.

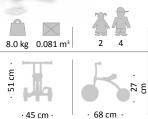

When designing Circleline, it was important that the products were easy to assemble. And they are. Each wheeled toy comes in two parts to put together – it's as easy as that.

Tricycle, small | Model 550.00

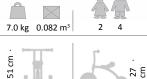

The classic tricycle in a brand new design. Every child loves the freedom to get around on this trike. It is easy to move forward, trains the muscles and develops motor skills.

PushBike | Model 560.00

Two rear wheels and no pedals make the pushbike very stable and easy for children to maintain their balance while moving. A good start before driving a tri- or bicycle.

· 45 cm ·

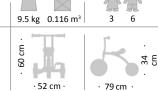

68 cm ·

Tricycle, medium | Model 551.00

A very popular, robust tricycle suitable for most children. A tricycle is a must on every playground. It stimulates the play of children and develops children's motor skills.

Patent no. ZL201130424978.8

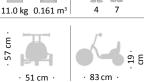

EasyRider | Model 553.00

This is a cool vehicle! Who will be the first on the playground to capture this great trike? You can easily imagine driving a Harley-Davidson or a Formula 1 racing car.

Davidson or a Formula 1 racing car.

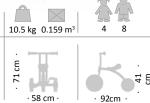

Patent no. ZL201130404528.2

Tricycle, large | Model 552.00

This tricycle is designed with a large front wheel enabling children up to 8 years of age to have fun on the playground. The keen children will love to drive around on this trike.

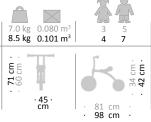

BikeRunner™ | Model 559.00 BikeRunner™ large | Model 566.00

The BikeRunner is the perfect choice when learning the children to develop their sense of balance. The bike is pushed forward using the feet.

Bicycle | Model 558.00

When riding this bicycle the children have reached the ultimate freedom to explore the world. They can easily get around and use their motor skills like an adult.

Patent no. ZL201130425243.7

WE THINK WITH OUR BODIES

tongue when they're really concentrating on something. If we have to do some large-scale thinking, we rarely

our brains in play. And we play best when we have the encouraging us to get involved in interesting, enjoyable

Safety Roller™ | Model 557.00

This fun Safety Roller provides maximum stability. This makes it ideal for children, who need to develop their balance and motor skills as well as for children with reduced capabilities.

Patent no. ZL201130401705.1

Scooter, large | Model 573.00 Scooter, small | Model 556.00

The scooter challenges the children's sense of coordination and balance. After driving on a tricycle it is a new world to scoot around on 2 wheels! Lots of fun for everyone.

Patent no. ZL201130424990.9

· 101 cm

A rickshaw provides lots of fun for two children – with one child as passenger, the other pulling.

Taxi | Model 554.00

A taxi is lots of fun and provides many great play ideas. The children love the role-playing games bringing extra features and imagination into their games with their friends.

Patent no. ZL201130404532.9

· 63 cm ·

· 110 cm

Circleline Twin Taxi | Model 555.00

A taxi for three children that opens up for many social games and role playing activities. The child may take his best friends for a ride, acting as a driver, while his friends are chatting in the back. Cool and sturdy design!

Patent no. ZL201430513216.9

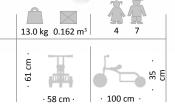

105 cm

Truck | Model 569.00

The open-ended platform invites friends to participate in the play. This could be by placing toys on the tray, which are to be moved around on the playground. And no matter what, this vehicle guarantees lots of fun and social play.

Trailer | Model 570.00

Cool and stable trailer designed to serve many purposes: Invites the children to participate in roleplaying by transporting sand to the construction site or toys from the sandbox. Easy and simple to attach.

Push Wagon | Model 571.00

This wagon with its sturdy box will give the children a lot of play value. The child may bring out deliveries in the form of sand or toys to their friends all over the playground. It encourages imagination and roleplay, as more children can take part in the game.

62 cm 50 cm

Kids Stroller | Model 568.00

Just the item for the child to take his or her best friend for a walk. The child, especially girls, will spend long periods of time walking another child or her favourite toy. A classical toy that stimulates role playing. It gives great play value that lasts.

· 48 cm

Police | Model 562.00

All bad guys better watch out. The police are here. This cool, black trike has room for two little officers of the law and is a natural centre for social activities on the playground. It sports excellent play value and also strengthens child motor abilities and reflexes.

· 59 cm ·

Fire Truck | Model 563.00

The sandbox is on fire again but help is just around the corner. This fun, red fire trike for two is ideally suited for role-playing on the playground. It strengthens the development of social skills and stimulates imagination, motor abilities, and reflexes.

Ambulance | Model 564.00

Call the ambulance! There is a pretend sick little boy in the playground – he has a bad tummy ache. Luckily, two medics are on the scene in no time on this exciting ambulance trike. It is fast; it is fun, and helps develop both social and motor skills.

61

· 59 cm

School Bus | Model 565.00

It is time for school! The driver will arrive to pick you up in a minut. This fun vehicle is excellent for role playing with the classical scene of a driver picking up his passengeres. Likewise model 562, 563 and 564 it strengthens both social and motor skills.

MINI VIKING

FOR DAYCARE FACILITIES AND CRÈCHES SUITABLE FOR AGES 1-4

Lots of play value with Viking Trikes!

The Mini Viking trikes and bikes represent a wide selection of products designed for use in day care facilities and crèches. They are suited for the kinds of motor skills children have at this age, and they are designed to help their development. The play value is high, and children love the Mini Viking.

The many different trike models help develop children's motor skills at an age when they are busy experimenting with using their own bodies, and finding new ways to move. That is why it is important that the Mini Viking series has an especially wide selection.

Tricycle, low | Model 414.20

The development and training of children's motor skills is an aim in itself – but it should also be fun. This is a good-quality tricycle that provides children as young as 1-year-olds with lots of fun.

Patent no. ZL201130425574.0

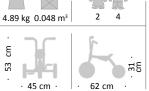

Tricycle | Model 442.20

This is the classic children's tricycle. This model has a foot plate and an adjustable seat. Many hours of playing await the child with this tricycle. The play value is great, but the possibilities increase even further if a trailer is attached.

Patent no. ZL201130404534.8

Trailer | Model 437.20

It is easy to attach this trailer to models 414.20 and 442.20. It is ideal for transporting sand and toys as well as all kinds of other interesting things children love to cart around all over the place.

3.8 kg	$0.046 \ m^{3}$

Twin-Wheel Scooter | Model 433.20

A challenging scooter that helps develop children's motor skills and sense of balance. The two rear wheels provide added stability and make the scooter suitable for beginners.

Patent no. ZL201130425239.0

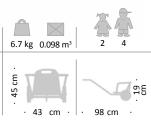

Rickshaw | Model 448.20

A rickshaw provides lots of fun for two children – with one child as passenger, the other pulling. Comfortable seat, armrest and back support to prevent the child from falling out. A small support at the back to avoid tipping. Carrying capacity 25 kg.

Patent no. ZL201130401688.1

MINI VIKING

FOR DAYCARE FACILITIES AND CRÈCHES SUITABLE FOR AGES 1-4

Lots of play value with Viking Trikes!

Easy to assemble! Please take a look!

The Mini Viking trikes and bikes represent a wide selection of products designed for use in day care facilities and crèches. They are suited for the kinds of motor skills children have at this age, and they are designed to help their development. The play value is high, and children love the Mini Viking.

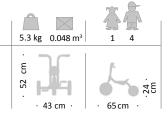

The many different trike models help develop children's motor skills at an age when they are busy experimenting with using their own bodies, and finding new ways to move. That is why it is important that the Mini Viking series has an especially wide selection.

Tricycle, low | Model 414.14

The development and training of children's motor skills is an aim in itself — but it should also be fun. This is a good-quality tricycle that provides children as young as 1-year-olds with lots of fun.

Patent no. ZL201130425574.0

Safety Scooter™ | Model 430.14

The toddler's first push a long scooter. The design with 4 wheels makes it stable and attractive to ride for the smallest kids. Robust and durable.

TURTLE KIDDY BUS

FOR DAYCARE FACILITIES, CRÈCHES SUITABLE FOR AGES 6 MONTHS UP TO 4 YEARS (MAX. 15 KG)

Lots of play value with Viking Trikes!

A great trip for the children – and their adult!

The Turtle Kiddy Bus makes children want to go for lots of outdoor rides. It makes outdoor activities easier and and safer for both children and adults. The Kiddy Bus is not only robust, it also features a well-thought-of design that focuses on safety, durability and ergono-mics. It is combined with a number of practical details and - of course - room to do what children do.

The Kiddy Bus is available in different models, with room for both four and six children aged 6 months up to 4 years (max. 15 kg). This makes the Turtle Kiddy Bus a great advantage in day care facilities and crèches. It is also useful in fun parks, theme parks and zoological gardens.

The Turtle Kiddy Bus is intended for use on pavements, walkways and roads.

Easy to push, easy to steer, easy to love

Children and their gear can be quite heavy, so we have focused on the ergonomics of moving the Kiddy Bus around. The Kiddy Bus is made of plastic and aluminium, which keeps it extremely light, and makes it easy to push. The front wheel turns, which makes it easy to maneuver the Kiddy Bus and change direction. There is no need to lift the Kiddy Bus to turn corners.

The children sit in pairs opposite each other, making it easy to talk with their friends. They get in and out through a side door, just like in a real bus. It's fun for children, and it saves adults the strain of repeated heavy lifting.

Turtle Kiddy Bus 6-seater | Model 801.00

- Room for six children aged 6 months up to 4 years (max. 15 kg)
- Delivered fully assembled
- Fits through doorways

WINTHER

A family company growing from local to global

Winther is a family company in its third generation. Since 1932, Winther has made products with a craftsman's pride, focusing on the play and movement of children.

On a cold winter's day in 1930, the history of Winther began with a traffic accident. It left Anders Winther unable to do the hard work of a blacksmith. Instead, he looked for other ways to make a living, and in 1932 he started the production of toboggans.

But winters are unpredictable in Denmark, and in winters with no snow, no toboggans were sold. So in 1935, Anders Winther decided to produce tricycles, scooters and other kinds of wheeled toys as well, and the company started to grow.

Shortly after overcoming the hardships of wartime, Anders Winther left this world. His brother, Frede Winther, continued his

work, introducing the first two-wheeled Winther bicycles in 1947.

Going international

Around 1955, the company started exporting to other countries. The very first client outside of Denmark was Örninn in Iceland, who is still a client of Winther. The tricycles became an international success and, in 1959, Frede Winther designed a tricycle with a fixed steel tray that became a classic, produced for several decades. A modernised version is still in production today.

Anders Winther, grandson of the founder of the company, took over as managing director in 1976. At that time bicycles for school children had become an important product for Winther. Anders Winther shared his grandfather's interest in developing trikes and bikes for small children and so, in the 1980s, he started producing tricycles for the educational market.

Focusing on the educational market

The play and well-being of children had become an important issue in society — and certainly in day care facilities. The management at Winther decided to start collaborating with designers and experts, and new inputs and considerations became part of the product philosophy: play and movement not only makes for happier children, it also stimulates their ability to learn. The Learning by Moving concept had come to life.

Winther had been exhibiting at the Nürnberg Toy Fair since 1982 and, in 1990, showed tricycles for kindergartens at the fair for the first time. From then on, Winther's educational product range grew and grew, along with an expanding international network of dealers.

The company's range of two-wheeled bicycles for older children and adults was later sold off, allowing Winther to concentrate on its core competence of developing, producing and selling bikes and trikes for the global educational market. This focus gave Winther a leading position on the global educational market, although the company still produces comfortable and safe family bikes and trailers for the transportation of smaller children.

From the product to the company mission

The company founder, Anders Winther, was interested in working with children, their play and their movement. This eventually became the mission of the company.

Winther develops products based on the concept of 'Learning by Moving', creating wheeled toys that stimulate children to play and move. With this focus, Winther has gone beyond just making high quality products.

Winther and Gonge playing together

Winther produces trikes and bikes and other wheeled toys for "learning by moving". Gonge produces toys and educational products that stimulate play and movement for "creative learning". These two philosophies match so well that merging the companies was a natural development.

Winther and Gonge both supply kindergartens, schools and other institutions globally. The two companies also supply the retail market. And the range of products of the two brands complement one another to offer a wide variety of ways to children playing, moving and learning. Gonge was merged with Winther on 1 July 2010.

Ask for Gonge's catalogue at win@a-winther.com and learn more about Gonge's products at www.gonge.com.

Winther Family Bikes

The Kangaroo family bike for two or four children gives freedom of movement for small groups of children – and for institutions and childminders. Find more information about this product as well as contact details on this website:
