Gonge + Winther	55

Creative learning in multiple ways

Gonge products make children move. But more than that, they also make them learn and develop in creative ways. For more that 45 years, we have aimed our products at stimulating physical, cognitive and social development - while having fun.

Play is the motivation for all activities for which Gonge products are intended. Our products are carefully designed to challenge physical limits, to sharpen mental attention and to support social interaction. We believe that the development of body and mind is essential for building the confidence that children will depend on throughout life.

We care for the special needs of all children, at the functional level of each unique child.

Children grow with Gonge products, reaching new development stages and improving functional levels.

The may even use our products for retraining and rehabilitation later in life.

Function, quality and design are always thoroughly integrated to comply with the high standards required by professionals in the child and educational fields. Gonge remains loyal to the origin of the company, as a supplier to the educational market. However, our approach to creative learning has recently earned increasing popularity in private families.

Physical

Gonge inspires and motivates children to be physically active. Our products will make children start balancing, climbing, crawling, jumping, bouncing, spinning, walking tip-toe, dancing and being physically active in as many ways as imagination and body function will allow.

The Gonge products can be used for anything from free play to specific therapy and structured training. Children will develop physical strength and motor skills such as transfer of weight, familiarity with heights, physical coordination including hand-eye coordination, and senso-motoric abilities like awareness of posture or sense of touch and balance.

We aim to motivate and challenge children at any functional level to develop their physical performance.

Cognitive

Body and mind cannot be seen as separate. When playing with the Gonge products, the physical activities and what the body senses become important when the children process them in their mind. That way, children improve the cognitive functions.

These functions are used when a child estimates the distance before a jump, but there is much more to it. Language is developed when naming, sorting and giving words to the physical activity. And creativity is challenged when imagination or curiosity is required, and when performing or story telling is driving physical activities.

Basic cognitive functions, like memory, attention, concentration, thinking and problem solving, are all vital for the physical activities inspired by Gonge. And the other way round, physical activity is now recognized as an important way to improve effective learning by stimulating the brain.

Social

Physical activity often involves social interaction. Gonge invites children to engage in activities integrating physical and social abilities. Children compete, race, role-play and perform, and they can do so with Gonge products.

They may learn cooperation and coordination in group play based on physical interaction. And they learn efficiently by imitating the physical activities of others.

We are happy whenever we see our products being used in social activities, because we believe that every child may develop itself physically, emotionally or cognitively when reflecting itself in the response from others.

BUILD N' BALANCE®

Exciting and challenging balancing system. The elements can be combined in countless ways so use your imagination to set up all the balance courses and landscapes you can build. With the great flexibility of Build N' Balance®, the level of difficulty can be varied to suit the development levels of the children and can be built at heights ranging from 10 to 24 cm – depending on how brave the children are! Build N' Balance® is being constantly evaluated and developed, introducing new parts and features to offer even more challenging play opportunities. Maximum load 100 kg.

BARS AND JOINTS

Build an obstacle for children to crawl under or jump over! With Build N' Balance®, bars and joints provide even more options for building play landscapes to challenge motor skills. Children can use the bars to build a tent by spreading a blanket over the bars. For safety reasons, the joints have been designed to allow the crossbars either to be mounted through the hole or placed loosely on top.

Bars and Joints | Art 2230

RIVER STONES

Stepping stones to better coordination, balance and fun. The River Stones are inspired by stepping stones in a river with each side of the triangle varying in steepness and difficulty. The purpose is to jump from stone to stone without touching the floor – you can vary the position of the stones to create more challenging paths for children. Each stone has a rubber rim on the base which prevent them from slipping, and also protect indoor floor areas. Provides challenging, active, imaginative fun. Builds children's confidence when jumping, judging distances, co-ordinating and balancing. Improved design of the original River Stones. River Stones can now be stacked so that they are practical to store. Incl. suggestions for games. Maximum load 100 kg.

3 big stones		36	36	8.5						
3 small stones		25	25	4.5						

HILLTOPS

Five 'hilltops' in different heights which will inspire children to jump from top to top. Hilltops develop children's ability to estimate distances and make them familiar with heights. Each top is provided with a rubber rim which prevent them from slipping and protect the floor. Hilltops are made so that they can not overturn. Incl. suggestions for games.

Hilltops offers high play value and ample opportunity to develop and stimulate children's gross motor skills, social skills, and – not least – their creativity.

MOUNTAIN

A large mountain (height 32 cm) designed to challenge children to reach the top by climbing up the broad steps. Stimulates infants to crawl up the steps, whilst older children can use the Mountain as stairs. Infants can experiment by jumping down from the Mountain, and the 4 plateaux suit different levels of daring! The Mountain is also ideal for use as seating. Can be used for movement stimulating play and exercise as a supplement to River Stones and Hilltops. Maximum load 100 kg.

RIVER

River provides unlimited possibilities for building balance paths! The elements are easy to join and very flexible, so only the imagination sets limits to the course of the river. Due to the size of the elements even small children will be able to build a "river". Made from durable plastic with anti-slip rubber edges, the river combines high quality with attractive design. The elements are stackable for easy storage. Can be combined with the "Island" and the "Bridge".

Design: Harrit & Sørensen

European Community Design No. 438015

Island and Bridge are elements designed to create totally new ways of playing and stimulating movement as a supplement to River. Combining Island and Bridge with River gives innumerable options for building landscapes for balance and movement. Made from durable plastic with anti-slip rubber edge. The Island will form the natural centre junction or "refuge". Bridge makes a challenging obstacle which children can balance on as they cross over. It can also be used in a cross format to represent a river running under a bridge.

Island | Art 2124

TACTILE DISCS

An inviting tactile material that challenges children's sense of touch on both hands and feet. At the same time, it develops the ability to describe sense impressions verbally. The tactile discs, made of nice-to-touch synthetic rubber, contain different tactile structures, each with its own colour. Each of the tactile structures can be found on a large disc for positioning on the floor, as well as on a small disc that the child will be able to hold in his/her hands. In terms of playing, the discs offer innumerable possibilities ranging from a fundamental sensing of the tactile structures to blindfold games based on memory and recognition. The games can be adjusted, so that they fit the child's age and level of functionality. Maximum load 100 kg.

Tactile Discs – complete set | Art 2116

FLOOR SURFER®

Roller board for play and therapy. The Floor Surfer® appeals to children and combines play and the training of motor skills. The Floor Surfer® has been developed in partnership with children's physiotherapists to ensure safe use by any child irrespective of motor skills level. The Floor Surfer® combines function, safety and design. Maximum load 100 kg.

Floor Surfer® | Art 2168

- The wheels are screened to minimise the risk of running over the child's fingers (photo 1).
- Quality wheels with double ball bearings and non-smudging wheels in clear PU.
- The Floor Surfer® is slightly tapered at the front to give increased freedom of movement for the child's arms (photo 2).
- The raised front part of the Floor Surfer® supports the coccyx when the child is sitting (photo 3) and the sternum when child is lying down (photo 2).
- The narrow sides act as handles where the child's hands are protected by the protruding corners (photo 4).

AIR BALANCING BOARD

A unique balancing board for play and rehabilitation. The board consists of a hard plastic surface with non-skid elevations in artificial rubber to give a good foothold. This surface is supported by a soft, inflatable base that regulates the hardness of the balancing board using air pressure. Low air pressure makes the board soft so that it moves slowly and thereby becomes less challenging for motor functions while high air pressure makes the board hard and lively which makes great demands on motor functions. For rehabilitation the balancing board can continually be adapted to individual needs through adjustment of the air pressure.

BALANCING BOARD

These balancing boards are very suitable for balancing exercises and rehabilitation of both children and adults. Ideal for young children as the balancing boards are completely smooth all the way round. Material: Wood – the board is provided with a rubber cover.

Balancing Board | Art 2110

MINI STILTS

Unique stilts especially developed for younger children. The hard rubber handles provide a good grip that can be adapted to the height of the child. Depending on how brave the child is, the child can adjust the height of the stilts using the loose plateaus (from 3 cm to 15 cm). Even small children are able easily and safely to mount or remove the plateaux. The Mini Stilts are easier for younger children to use than pot stilts or traditional wooden stilts. The handles allow an older child or an adult to help younger children who have not yet mastered the stilts on their own. Made of plastic base with sole and handle of artificial rubber. The four plateaux are made of plastic. Maximum load 100 kg.

BIG FOOT STILTS

Our stilts suggest a jumbo foot – or gigantic (platform) shoes. The bending of the sole is adapted to the movements of the foot. The foot is red plastic with a strong black rubber sole. The aluminium stick is shaped to ensure a good grip. A black rubber knob at the end of the stick prevents children from getting hurt. Design, quality and joy of playing form a synthesis. Maximum load 75 kg.

SUMMER SKIS

Summer skis look easy to use, but it can be difficult to keep in step. The skis train the basic motoric functions, as the children must coordinate their movements. Made of wood with anti-skid rubber pieces which protects the floor when used indoors.

GO GO

Go Go -3rd generation - in a modern design and improved quality. Go Go reflects the ambition to manufacture strong and beautiful toys that are safe, stimulating, and fun to play with. Our designers have given Go Go an up-to-date design, which combines panache with strength. On the basis of years of experience, we have created Go Go to fulfill the quality requirements set forth by child care centres. Maximum load 50 kg.

GO GO BUS

The Go Go Bus with improved quality combining elegance and strength. The Go Go Bus reflects our aim of manufacturing sturdy and beautiful toys which are fun and safe for children and assist their motoric development. When two or three children "board" the Go Go Bus, they have to coordinate their movements, which children find both challenging and fun. Based on our many years of experience, we have designed the Go Go Bus to meet the quality demands made by child care institutions. Maximum load 90 kg.

CLOWN'S HAT

The Clown's Hat encourages small children to perform – because it is not easy to balance with something on your head! Concentration and balance are required to wear the Clown's Hat which develops body consciousness and attention to posture. Playing with the Clown's Hat can be both individually challenging and form part of competitive scenarios. The Clown's Hat is shaped to make it easy for small children to use and the parts are so soft that dropping the rings does not hurt.

BALANCING EGG

Inspired by cultures where the ability to carry things on one's head is a necessity, this Balancing Egg is unique in combining a lot of fun with awareness of posture and development of balancing skills. The base of the egg is a soft ring that adapts to the head of each child. The skill now is to build your egg, piece by piece, on this base. Younger children can start by balancing one or two pieces of the egg. To challenge those who have perfected the skill (not an easy task), place some items inside the egg or challenge your little Eggheads to a race!

ACTIVITY RINGS

New, brightly coloured Activity Rings that appeal to children of all ages – and to adults. Activity Rings can be used as inspiration for countless activities such as dancing in a circle, walking on tiptoe in the rings, balancing the rings on your head, juggling rings on arms and legs, throwing rings to each other, jumping with rings around your legs, building figures – the combinations are limitless. The rings can be used in both spontaneous and structured activities during play, rhythmics and gymnastics. Suitable for individual as well as social activities. The Activity Rings are made of soft artificial rubber.

SHOAL OF FISH

The shoal of small fish is ideal for free play, but also perfect for teaching situations. Children are able to hide small items in the 'belly' of the shoal fish as part of memory, sorting and naming games in linguistic or cognitive learning. The element of surprise in discovering what the fish has 'eaten' provides excitement and motivation for children and keeps their attention in a teaching situation. The small orange buttons on the shoal fish make it possible to 'catch' them with the fishing rod magnet (Art 2175). Children compete in catching most fish or in first finding a certain item hidden among the fish (memory game). Shoal with 5 small fish.

FISHING ROD

With this fishing rod, children are ready for a fishing trip. The desire to catch a fish makes children challenge their attention, balance and hand-eye coordination. Getting close to the fish and getting it on the hook so that it can be landed require motor skills and mental concentration. Children can land the fish (boathook) or challenge themselves with a hook and line. Depending on the 'fish' to be caught, the 'fisherman' has to use the hook or the magnet on the hook. Shoal fish (Art 2176) are well-suited for use with the fishing rod, but many other items in the children's environment can also be 'caught'. The fishing rod is very versatile and can be used in imaginary and role-playing games that include interaction and language. Several children can also compete for 'Who catches the most fish without falling in the water?'.

Fishing Rod | Art 2175

The fishing rod is made of non-breakable plastic with artificial rubber handle. The rod has a strong magnet on the underside of the	Age	Pr Ø	oduct L	size (cı W	n) H	Single unit box weight kg	Single unit box volume m³	Number of units in export carton	Export carton weight kg	Export carton volume m³

AQUARIUM & PLAYMAT

The "Aquarium & Playmat" has a unique ZipBin® design suitable for storage and use as a playmat (64 cm x 56 cm). Simply unzip the corner zips of the aquarium to unfold into a seascape. Suitable as an addition to Shoal of Fish (Art 2176) where children are able to catch fish in either the aquarium or the pond. The product's beautiful design makes it an attractive storage box for the Shoal of Fish and other toys.

G®NGE

A wonderful giant top for hours of fun. Top for 1 or 2 children. Lots of uses: use it to rock from side to side, spin it, build a den, etc. Small children can even use it as a boat in the pool (only under adult supervision). Develops children's physical coordination while they play. Made of strong plastic for both indoor and outdoor play. Very suitable for basic physical coordination training with disabled people.

Top Art 2100

Take a good look at our original top. Only the original top is shaped with a pointed centre. This enables children to get the feeling of turning upside-down when moving the top 360° around the centre (photo 1).

The edge of the top protects children's heads and hands from getting hurt (photo 2+3).

Raised edges prevent children from getting their fingers caught under the top. At the same time there is no risk of suffocation if children hide inside the top (photo 4).

ROCK AROUND

A spherical rocking toy for indoors or outdoors. Children can sit in it and rock it from side to side, or spin around. There is even room for two smaller children to sit in it together. Users can hold on to the rim without getting their hands jammed between the rim and the floor. Develops physical coordination skills.

Rock around | Art 2104

BABY TRAMPOLINE

On this trampoline very small children can practise trampoline jumping. The canvas is tensioned such that even small children will experience a springing effect which they would be too light to feel on ordinary trampolines. The spring sheet is only 12 cm above the floor. The rubber cover yields protection against the metal frame and the supporting handles are covered with foam to protect face and teeth. The construction is solid – beautiful design combines simplicity and function. With focus on safety - for children up to 20 kg.

TRAMPOLINE

Functionally correct and beautifully designed toy for children. Probably the most beautiful and most suitable trampoline ever seen in the child-care sector. The sloped protective cushion with high rear edge (11 cm) yields utmost protection during play. Foam-covered handle is included. Reinforced springsheet suspended in steel springs. Welded steel construction. Maximum load 50 kg.

PARACHUTE ENCOURAGING EXERCISE

Book with inspiration, play ideas and background for activities involving parachutes. The book provides very detailed descriptions of how the parachutes can be used in educational work in childcare centres and schools. The book is full of play ideas for children to create fun and meaningful physical activity. The book also describes how parachute games stimulate social and intellectual development. Available in 6 languages. 56 pages with colour illustrations.

RING TOSS

A traditional game in a unique quality and design. The popular tossing game is challenging both physically and mentally as it requires concentration and body control to assess the distance and throw the rings with precision. At the same time, the game is fun as it can be used in many kinds of competition. The game includes two supports so that it can be placed at an angle to make the game easier for very small children.

Ring Toss | Art 2908

JELLYFISH

Jellyfish; a set of stepping stones of soft transparent artificial rubber. Jellyfish appeal to children and can be used for motor play where children walk or jump from Jellyfish to Jellyfish. Even small children can use Jellyfish being soft and only 2.5 cm high. Combine the orange and blue Jellyfish for even more ways to play. C ombining Jellyfish with inserts (not included) means their patterns can gain extra significance depending on whether they can be found under an orange or blue Jellyfish (e.g. warm - cold, plus – minus or vowels – consonants).

FRUIT SALAT (2152+2153). A memory game combining cognitive skills and movement. Fruit salad consists of 12 pieces with a fruit depicted on the one side (4 fruits - 3 pieces of each) and the other side blank. The pieces are inserted in a similar number of Jellyfish (not included) before the game begins. When a child calls out the name of a fruit, the other children are to find the fruit as quickly as possible. Children play with the picture side hidden, forcing them to hunt for the fruit or use their memory to find it! Moving among the Jellyfish the perspective changes which is a challenge to the memory.

MIRROR GAME

An exiting game with mirrors - both amusing and instructive. Start by turning up a pattern card. Each player must then attempt to form a mirror image of this pattern using 2 bricks and a mirror. The first one to succeed wins the pattern card. Using the mirror can be tricky, and an understanding of the symmetry of a pattern is an advantage in this game.

Retail Packaging

Gonge is currently developing retail packaging for the company's most popular products. Text and images on the packaging will efficiently communicate product characteristics in six languages.

The new packaging is our response to the increasing demand for our products from parents and other private consumers.

Gonge – from education to creative learning

The Gonge family started "Skoleforlaget Gonge" in 1966, producing and marketing educational materials especially for schools in Denmark.

Since then, the company has changed and developed into a global developer of creative learning.

The tipping point of the company came in 1986 with a single product the Top, a toy produced for children's play and movement. That grew into not only a wide and varied range of toys and products, but into a philosophy of stimulating movement and the cognitive and social development of children.

Gonge and Winther playing together

Gonge develops toys and educational products that stimulate play and movement for "creative learning". Winther produces bikes and tricycles and other wheeled toys for "learning by moving".

These two philosophies match so well that merging the companies was a natural development.

Gonge and Winther both supply kindergartens, schools and other institutions globally. And the range of products of the two brands supplement one another to offer a great variation of ways for children to play and move.

Gonge merged with Winther on 1 July 2010. Since then all Gonge business and all contacts now take place through A. Winther A/S.
